List your Math Class: Pre-Calculus List your Instructor: Sean

Sean is a very fun teacher. He loves math and he makes it fun to do while we are learning things. I also love math so it is definitely my favorite class. He taught us about the unit circle, transformations of trig graphs, function composition, inverse functions, and along the way he also taught us other things when he went on tangents and I might be forgetting a few things. I am definitely going to be prepared when I go into pre-calculus in the fall. I knew a bit of the stuff Sean showed us, but he explained it in a way that made more sense. I believe he improved my confidence. My suggestion is that nothing changes about the class and how he teaches. It was awesome.

List your Math Class: Pre-Calculus

List your Instructor: Sean

My math class this year was absolutely amazing. The academic content really gave me an intro to different aspects of Pre-Calc even Trig. Sean made sure to cover the basics like graphing, solving, and writing equations. Our class got to use the unit circle a lot. Sean also made a fun assignment like making a sine function roller coaster. Sean, himself is an all around great teacher, role model, friend, and person. His gregarious personality always made my class fun. As a teacher Sean made sure everyone was comfortable and could be themselves. He also constantly reviewed with us and made sure that everyone comprehended each lesson. If someone ~~did~~ did not understand, Sean always made sure to provide extra examples. During study session he was able to help me when I needed it the most. Having Sean 2 years in a row really helped me blossom as a math student. I realized I was able to be more open in and outside of class with Sean, and to ask many different questions. Before taking his class I was not a huge fan of math whatsoever. After being in his class for two consecutive years, I have actually started enjoying math. I have learned so much from Pre-Calc. I know cosine, tangent, and sine has been expanded. When I was introduced to the unit circle, I immediately panicked, but Sean showed me an easier way to label and identify points. Overall I enjoyed Sean's class very much. I felt very comfortable being in class with him and my peers. He made class extremely fun. I gained so much knowledge and confidence from his class. Sean's class was truly enriching both years. My only suggestion would be to keep the review week. This is because Sean was unsure of keeping it for next year. I found that the review week was critical. This helped me retain more knowledge. I found that I put more answers on this celebratory day of knowledge than I did last year. Studying and reviewing in class will definitely benefit the classes in the future.

PS math is hella dank

List your Math Class: Pre Calc List your Instructor: Sean

First off a lot of what I learned my algebra II teacher tried to teach me this year and it never made sense, now I'm pretty sure I could teach those things. I really enjoy having Sean as a teacher, he understands that everyone learns differently and he makes math fun. I love math, but he always finds ways to make it better. I also learned things I didn't even know existed, like the unit circle? Yeah I got that down. Also the class, well Sean prepared us for the upcoming year with notes, packets, examples, he really made sure we wouldn't get lost. I feel like math would always make sense and a lot more people would enjoy it if Sean taught it.

List your Instructor: **Sean**

In Pre-Calc this year I have learned more than I thought possible. I may not know it all by heart at this point but I'm positive the notes I took in class and the sheets that were handed out in this class will help me greatly throughout next years class.

Sean also does a great job at making math seem important to real world situations which I personally have to ask myself "why am I doing this?" "What will this be used for?" And he answers these questions very well.

List your Math Class: \_\_\_\_\_ Pre Calculus \_\_\_\_\_ List your Instructor:  
\_\_\_\_\_ Sean

I had Pre-Calculus this year with Sean. It actually become my favorite class. I already have a passion for math and well this summer at Upward Bound it made me realize how much I really do appreciate the concepts and how it just makes the most sense to me. I struggled at first, settling in, trying to focus, and just really not being shy. But I also learned that if you do not ask questions and you don't try you will never succeed. Sean is such a great teacher, and I learned a lot. Especially, my new favorite the unit circle. Also I think I gained a passion to just volunteer and just try even if I was wrong. Sean always made it feel like it was okay to be wrong and that it was basically a judge free area, I wouldn't recommend anything. I had a pretty awesome time in math this summer.

Sean,

While I am grateful for a number of things, your class comes strongly to mind. During my time as a student, I've always thought "I'm just not very good at math" and I accepted it. In your calculus class this summer, I've learned that I can breeze through anything with a lot of hard work and confidence, and I acquired that confidence in your class. Upward Bound has been the best experience for me to learn the value in persistence and hard work, and I owe it to you (and the other staff too). I'll take these lessons through high school (what's left, anyway) and college, so thank you.

Sincerely,
